NUMBER OF FARMS

LAND IN FARMS

REVISED ESTIMATES FOR 1975-1980

PRELIMINARY ESTIMATES FOR 1981

Farms and Land in Farms 1975-81
Revised Estimates 1975-80

This publication contains the Department of Agriculture's official estimates for number of farms and land in farms. Revised State and U.S. estimates are based upon a review of the original estimates, taking into consideration: (1) the 1974 and 1978 Census data, (2) data from the ESS June Enumerative Survey, and (3) data in State offices such as State Farm Census and other data used to estimate crop acreages and livestock numbers.

In using the published 1974 and the 1978 preliminary Census data, it was necessary to be aware of the different data collection procedures used by the Bureau of the Census. The 1974 Census publication of farm numbers had considerable incompleteness. Factors indicating incompleteness were published by Bureau of Census in Volume IV, Special Reports, Part 3, Coverage Evaluation, Table 13. These factors were used to adjust the 1974 Census data. The 1978 published Census data contain the expanded land area sample estimate designed to account for the incompleteness of the list. The 1974 and 1978 Census data provided general benchmarks for farm numbers. Estimates for intracensus years were based largely upon changes indicated by the June Enumerative Survey which measures the number of farms as of June 1 of each survey year.

Estimates of land in farms represent land operated in places defined as farms. Estimates of farmland exclude government owned land grazed on a permit or fee basis but include land leased from the government for production of crops or livestock (includes grazing, if on a per acre basis).

Farms are defined as places from which \$1,000 or more of agricultural products were sold, or normally would be sold, during the previous year. All estimates in this publication are based upon this definition.

This publication is the complete series of farm numbers and land in farms since the current definition was adopted in 1975. Previous series using earlier definitions can be found in: Farm Numbers, December 28, 1978; Statistical Bulletin #599, December 1977 and Statistical Bulletin #507, January 1973.

TRENDS

Farm numbers declined from 2.52 million in 1975 to 2.43 million in 1980. Nationally, the number of farms was relatively stable during the 1975-80 period. The number of farms in the Midwestern States has continued to decline while Northeastern and Westcoast States show increasing numbers of farms in recent years. The preliminary 1981 estimate at 2.42 million farms continues the slow decline of recent years. The Midwest States account for most of the decrease.

Land in farms show a gradual loss, decreasing about 2% since 1975. The average size of farm, however, increased from 420 acres in 1975 to 429 acres in 1980. For 1981, the preliminary forecast is 430 acres. This series does not estimate farms by size, or for geographic areas at less than the State level.

NUMBER OF FARMS AND LAND IN FARMS, UNITED STATES, 1975-81

YEAR	:	NUMBER OF FARMS	:	LAND IN FARMS	:	AVERAGE SIZE OF FARMS
	:	THOUSANDS		THOUSAND ACRES		ACRES
1975	:	2,521		1,059,420		420
1976	:	2,497		1,054,075		422
1977	:	2,456		1,047,785		427
